

Case Study - Rob Pike, Technical Designer

1. What benefits has DesignDataManager brought to your organisation?

The two clearest tangible benefits are time saved and data accessibility. The level of manual file management is now zero, and all design data is now available to all personnel.

2. What influenced your choice to choose DesignDataManager over alternative PDM systems?

DDM was clearly the most appropriate product for our small number of seats, and the high level of service and technical competency from CSI left us with an easy choice.

3. Has DesignDataManager directly influenced decreased development timescales at your company?

Yes, in that the level and quality of input from a wider band of people at the appropriate time is impacting the design at the right time - earlier!

4. Could you envisage working without data management? Please expand on this if you wish?

When we invested in Pro/ENGINEER, data management was not considered an issue. 18 months later, the mass of information the system produces was becoming complex and time consuming to manage. DDM simply takes care of all this.

5. Please make any additional comments that you feel appropriate regarding DesignDataManager or of the CSI organisation/people.

Overall, DDM is an excellent solution, with CSI offering high quality training and responsive support.

About Park Air Systems

Park Air Systems provides Communication, Navigation and Surveillance (CNS) solutions for the world's airspace. It currently has an installed base encompassing 167 countries. A multi-national operation with facilities in Europe, USA and Asia, the company is dedicated to implementing advanced air traffic control systems. Throughout Park Air Systems' history the organisation has specialised in providing leading-edge systems to both aviation and other transport applications. Today Park Air Systems dedicates itself completely to designing, manufacturing and installing ground-based systems for use in air traffic control and air defence applications. The company is a wholly owned subsidiary of Northrop Grumman Corporation.
