

### **Aero Stanrew choose DDM for PLM**

CSI are pleased to announce that Aero Stanrew have chosen to implement DDM to provide a comprehensive solution to address their short and long term requirement for PLM. Starting with document and project data management for SolidWorks and AutoCAD, DDM will continue to be rolled out to cover enterprise document, project and supply chain data management.

“We are excited about partnering Aero Stanrew on their PLM initiative. They are forward thinking and have a good focus on efficiency and how the introduction of the right technology can move them forward in terms of how they do business throughout their product lines and supply chain” Joe McBurnie, CSI Managing Director.

“Aero Stanrew is a progressive, customer focussed organisation providing high quality, high reliability products to the aerospace and defence industries. The addition of DDM as a PLM solution to our business system toolset will provide flexibility and efficiency improvements to the support functions that underpin our manufacturing and supply chain processes. We appreciate that there is a significant R&D element to delivering software tools that genuinely work for the business, so it was CSI's flexible and customer focussed approach, coupled with CEO Joe McBurnie's personal commitment to providing development support, that helped us decide to partner with them on this venture".  
Owen Rolfe, Aero Stanrew Director

### **Aero Stanrew Limited**

Aero Stanrew Limited, based in the south west of England, specialises in the design & manufacture of electromagnetic components and electronic systems. The company has an objective of satisfying and exceeding the demanding requirements of its customers and is constantly striving to make improvements in all aspects of the business. With a history dating back to 1945, the company is privately owned and was acquired by its present owners in 2001. The company specialises in the aerospace and defence market and other hi-rel markets where the technical requirements are demanding.

### **About DDM**

DDM is an easy to use, multi-CAD PDM solution for Solid Edge®, IronCAD®, SolidWorks®, Creo Elements/Pro® AutoCAD® and Inventor®. Providing full lifecycle management and revision control of parts, models, drawings and office documents. DDM ensures that the right information is delivered to the right people at the right time.

DDM is a scalable system that grows in line with your needs. At a basic level it can be used as a file vault with simple access controls ensuring data integrity. At an advanced level it can satisfy the needs of a global multi-site organisation with document, project and process management. DDM provides a complete electronic audit trail of change and release history, helping you meet your compliance obligations.

The DDM philosophy is focused on delivering a solution to have you productive within hours, without the expensive and lengthy implementation times normally associated with PDM installations. Cost of ownership is minimised through low on-going maintenance, centralised backup and simple fast upgrades.
