

Kalmar improves efficiency to address increase in orders.

Kalmar Motor AB has recently experienced a sharp rise in new orders and needed to improve the efficiency of their design engineering and documentation workload. They are currently using Autodesk's Inventor as their primary 3D modeling solution and were looking for a PDM system for storing and audit tracking CAD models and drawings.

"We chose DesignDataManager (DDM) for several reasons. We wanted the same system to also manage all other documentation of various file formats such as email and office files, etc. These documents will be linked to different CAD files and vice versa." Anders Johansson

Anders went on to say, "Using DDM, we will always know which version of a part or document is the latest and which version was used for the development and production of each machine".

Kalmar also benefits from the project data management capabilities of DDM. They also liked the Multi-CAD support and flexibility of DDM which meant they did not need to be tied to a single CAD vendor if their requirements change in the future.

About Kalmar Motor AB www.kalmarmotor.com

Kalmar Motor has worked in the same field for more than 40 years. We develop and manufacture aircraft tractors. We move commercial aviation aircraft of all sizes quickly and carefully with accessibility 24 hours a day and 365 days a year. That requires more than muscles. By combining simplicity with the latest cutting edge technology, we create tractors that last longer, require less service, and offer a level of comfort that enables drivers to achieve top performance.

About DDM www.designdatamanager.com

DDM is an easy to use, multi-CAD PDM solution for Solid Edge®, IronCAD®, SolidWorks®, Creo Parametric®, AutoCAD® and Inventor®. Providing full lifecycle management and revision control of parts, models, drawings and office documents. DDM ensures that the right information is delivered to the right people at the right time.

DDM is a scalable system that grows in line with your needs. At a basic level it can be used as a file vault with simple access controls ensuring data integrity. At an advanced level it can satisfy the needs of a global multi-site organisation with document, project and process management. DDM provides a complete electronic audit trail of change and release history, helping you meet your compliance obligations.

The DDM philosophy is focused on delivering a solution to have you productive within hours, without the expensive and lengthy implementation times normally associated with PDM installations. Cost of ownership is minimised through low on-going maintenance, centralised backup and simple fast upgrades.

About CSI www.csi-europe.com

CSI develop and market DDM to SME businesses globally. With over 20 resellers worldwide, we provide you with professional and local service enabling you to achieve your goals without fuss. With over 20 years' experience in the PDM/PLM industry, we pride ourselves on our strong customer focus, professional global support, in-depth product knowledge and quick solution implementation.
